

**Product Name:**

Private Line

**Availability:**

Private Line Services from EnTelegent are available where ever digital access facilities exist.

Our partner networks use synchronous optical network (SONET) technology for transmission at line speeds appropriate for basic voice and multi-gigabit services, including DS-1 (1.544 Mbps), DS-3 (45 Mbps), and OC-n (155 Mbps and up).

**Capabilities:**

Transport is over an advanced Fiber Network, which is designed with the newest optical networking equipment for speed and efficiency and currently spans more than global 190,000 miles.

**Data Services | Private Line****Product Description**

EnTelegent offers scalable Bandwidth Transport with Fiber Optic SONET Reliability. Domestic Private Line Transport services deliver end-to-end, full-service provisioning of circuits for secure transmissions between geographically dispersed locations.

**Point-to-Point Service**

- ❖ Bi-directional
- ❖ 4-fiber
- ❖ Path diversity

**Benefits**

Consolidate voice, data, video and Internet transmission channels onto a single, high-capacity optical backbone.

Save money by aggregating lower-speed services onto one high-speed channel with the precise capacity you need.

Send transmissions with high accuracy; 99.999% system availability.

Virtually eliminate downtime because redundancy is built in at every level.

Scale your capacity as your needs grow.

24x7x365 network monitoring and management.
