EnTele-Bundle

EnTele-Bundle delivers a powerful set of tools that provide a single point of administration and control for all telecom providers, services, activities and invoices.

Product Description

EnTele-Bundle delivers a centralized inventory for circuits, services, costs, contracts, and invoices. It reconciles billing to internal documentation for real-time reporting - which is accessible anywhere, anytime-via secure web portal. This can increase the effectiveness of your IT, purchasing, budgeting and accounting functions.

Consolidated billing and invoice processing structure reduces the number of bills and checks that must be processed by Accounts Payable. No matter which carriers you use, EnTelegent can receive and process their invoices for you.

EnTelegent Solutions receives your invoices, reviews them for accuracy and summarizes them. EnTelegent can pay the invoices and send you a summary invoice, or we can present you with a consolidated remittance report for direct payment to the carriers. You benefit from a simplified, consolidated bill-pay process.

Centralized service ordering, change management and repair tracking provide you a one-stop-shop for customer care and repair needs. EnTelegent will handle those calls, track them and see them through to resolution. This frees you to focus on the enterprise instead of managing service issues.

EnTele-Bundle also delivers optimization analysis of your existing telecom environment to identify opportunities to improve efficiency and lower the cost of your services.
