Availability in the US where wireless LTE service is offered.

You can enjoy:

- Active, pre-provisioned, dual-SIM, modem/router for increased success rate of deployment and successful 1st attempt install
- Dedicated team of wireless experts to assist in deployment
- 24x7x365 post-installation support and onsite integration
- Pooled pricing with one simple, easy-to-read bill
- Excellent complement to Cable and Broadband Internet deployments

Product Description:

EnTelegent Solutions is in the business of keeping your company connected at all times with wireless business internet. 4G LTE and LTE-A harness the power of robust, ubiquitous 4G networks to give you lightning-fast Internet connectivity no matter where your offices are located. We combine the fastest speeds and highest network bandwidths available with the latest wireless equipment. The result is a multi-carrier, dual-sim solution with a primary active and secondary replacement that gives you the always-on connectivity you need to keep your mission-critical applications running.

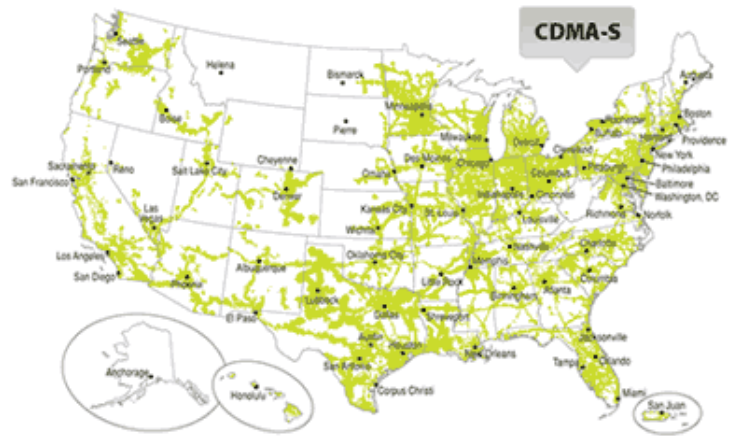

This solution is complementary to SD-WAN deployment, with static IP option available.

We offer several different usage plans: pooled, standalone, usage based, or customize your own to fit your individual business needs and we utilize all four major US carriers to employ the best wireless signal available at your location. External antennas are available to boost signal to locations that may have a poor wireless signal.
