

CASE STUDY MINI

SD-WAN, Managed Infrastructure & EnVision Life Cycle Management

A Mortgage Company Moves to a New SD-WAN Solution

01

Overview

The Client was on a competitor's managed WAN solution and was unhappy with long lead times for configuration changes and a general lack of support.

02

Challenge

- The Client required fast site turn-ups (3-5 day turn-ups are common for the mortgage industry) and a flexible connectivity partner.
- Objectives included a managed, scalable WAN solution appropriate for data centers, home offices, remote offices with few employees, a managed router/switch/access point, proactive monitoring, and remediation.

03

Solution

- EnTelegent provided a solution that included buying CPE to capture discounts, configuring and project managing installation, and ongoing support.
- EnTelegent also managed circuit installations and provided rebilling and circuit remediation for third-party access.
- The Entelegent EnTeleSource Portal housed access for network and circuit health and reporting.

Upgrade your SD-WAN to a managed, scalable solution with fast, reliable EnTelegent Solutions.
