

CASE STUDY MINI

Universal Connect - Enterprise-Grade Router

Rural/Isolated Connectivity for Construction

01

Overview

A General Contractor installed a major Carrier's routers at three rural job sites to provide Wi-Fi Connectivity. The Client quickly determined this was not a reliable solution to provide the project with coverage and worked to identify an alternative.

02

Challenge

- One job site had no Carrier service for weeks due to a new cell tower installation which disrupted all Wi-Fi use within a 10-mile radius.
- The Client contacted another carrier that was installing underground fiber in the area. That carrier could not help, so they referred them to an EnTelegent Solutions Technology Advisor.

03

Solution

EnTelegent's Advisor visited the site the next day and provided a vSIM Hotspot as a temporary solution, followed by a vSIM Router the next week.

04

Result

- The Client now exclusively uses Universal Connect at all their job sites.

05

Feedback

"The project manager was thrilled that we could solve his connectivity issues so quickly and easily. UNIVERSAL CONNECT provided superior service, kept the project on schedule, and saved the Client money!"
